LAB EXERCISE - 2

ORDER DATABASE

Consider the following schema for Order Database:

**SALESMAN(Salesman_id**, Name, City, Commission)

CUSTOMER(Customer_id, Cust_Name, City, Grade, Salesman_id)

ORDERS(Ord_No, Purchase_Amt, Ord_Date, Customer_id, Salesman_id)

Write SQL queries to

1. Count the customers with grades above Bangalore's average.

2. Find the name and numbers of all salesman who had more than one customer.

3. List all the salesman and indicate those who have and don't have customers in their cities (Use UNION operation.)

4. Create a view that finds the salesman who has the customer with the highest order of a day.

5. Demonstrate the DELETE operation by removing salesman with id 1000. All his orders must also be deleted.

1. Count the customers with grades above Bangalore's average.

SQL>SELECT COUNT (CUSTOMER_ID)
FROM CUSTOMER
WHERE GRADE >
(SELECT AVG(GRADE)
FROM CUSTOMER
WHERE CITY='BANGALORE');

```
COUNT(CUSTOMER_ID)
------------------
                 1
```

2. Find the name and numbers of all salesman who had more than one customer.

- **SQL**>SELECT SALESMAN_ID, NAME
  FROM SALESMAN
  WHERE SALESMAN_ID IN
  (SELECT SALESMAN_ID
  FROM CUSTOMER
  GROUP BY SALESMAN_ID
  HAVING COUNT(SALESMAN_ID) > 1);

```
SALESMAN_ID             NAME
----------------------  ------------
1000                    RAVI
```

3. List all the salesman and indicate those who have and don't have customers in their cities (Use UNION operation

- **SQL**> (SELECT A.SALESMAN_ID, A.NAME, A.CITY

  FROM SALESMAN A, CUSTOMER B

  WHERE A.SALESMAN_ID = B.SALESMAN_ID AND A.CITY=B.CITY)

  UNION

  (SELECT A.SALESMAN_ID, A.NAME, A.CITY

  FROM SALESMAN A, CUSTOMER B

  WHERE A.SALESMAN_ID = B.SALESMAN_ID AND A.CITY != B.CITY);

```
SALESMAN_ID          NAME               CITY
----------------     ------------       ------------
1000                 RAVI               BANGALORE
1001                 SURAJ              DELHI
1002                 PREM               LUCKNOW
1003                 JOHN               BANGALORE
```

4. Create a view that finds the salesman who has the customer with the highest order of a day.

SQL>

CREATE VIEW MAX_ORDERS AS

SELECT S.SALESMAN_ID, S.NAME, O.ORD_DATE

FROM SALESMAN S, ORDERS O

WHERE S.SALESMAN_ID=O.SALESMAN_ID AND

PURCHASE_AMT =

(SELECT MAX(PURCHASE_AMT)

FROM ORDERS O1

WHERE O1.ORD_DATE = O.ORD_DATE);

View created.

SQL> SELECT *FROM MAX_ORDERS;

1001	SURAJ	17-FEB-17
1000	RAVI	05-JUN-17
1000	RAVI	10-JUL-17

5. Demonstrate the DELETE operation by removing salesman with id 1000. All his orders must also be deleted.

DELETE FROM SALESMAN WHERE
SALESMAN_ID=1000;

```
1 row deleted.

SQL> SELECT *FROM SALESMAN
  2  ;
